

Disaster Recovery that checks all the boxes.

Smart DR Disaster Recovery

An effective "Plan B" is only as good as its preparation and design. Appropriately sizing your disaster recovery solution to fit the requirements of your infrastructure is imperative to ensure IT functionality throughout an emergency situation. Omega Systems' professionals are equipped with the knowledge to assess your infrastructure and accurately pinpoint your "Smart" disaster recovery strategy.

Omega Systems' Smart DR provides you with a complete disaster recovery plan. Should your infrastructure experience a disaster, Omega Systems will quickly recover your data, at your facility or ours, ultimately minimizing interruption.

Our solution has consistently returned Smart DR clients to full functionality within hours, as opposed to days or weeks of downtime and productivity loss.

Omega Systems' secure data center consistently meets or exceeds 3rd party qualification criteria.

Maintenance of SSAE 16 AT 101 SOC 2 certification ensures your data is properly handled in a professionally controlled and regulated environment.

How do we do it?

Reinforcement

Through evaluation, analysis and careful preparation, our engineers design an appropriate recovery solution, capable of quickly restoring your IT infrastructure.

Replication

Image-based replication of your data ensures your business' most valuable information is available when you need it.

Recovery

On your premises or in the cloud, our backup devices provide multiple options for recovering your data and getting you back to business.

Reassurance

Tested and true, the Smart DR service allows you to do periodic data recovery testing so you are 100% confident your data remains secure.
