

 **It's Your Business, Of Course You Want to Protect It!**

Smart Secure Network Security at the Firewall Level

A Simple & Effective Way to Apply Advanced Threat Protection to Your Network

IT departments can become easily overwhelmed by managing sophisticated cyber threats and attacks, ballooning compliance burdens and mounting pressure to embrace new technologies. Businesses with a poor security posture are no longer concerned with *if* a costly attack will take place, as much as they are concerned with *how many* attacks they can sustain. As a result businesses are investing in multiple advanced network security technologies to guard their core assets.

Enhance Your Cyber Security Strategy & Stay Ahead of Threats

Smart Secure, by Omega Systems, is an option-based managed network security defense, designed to add a layer of protection at the firewall level. This turn-key solution was designed on a tiered platform to accommodate varying security objectives - ranging from the basics of enhancing hardware threat protection to more complex functionality of satisfying punitive, regulatory, business-specific compliances. Benefits Include:

- Hardware Leasing Options
- Best-In-Class UTM (Unified Threat Management) Hardware
- Professional Support from a Centralized Platform
- Advisory & Assessment and Assurance Testing
- Logging & Reporting Capabilities
- Cutting Renewal & Upfront Hardware Costs
