

Are you sharing with confidence?

Secure business collaboration can be tricky.
We provide convenience and assurance.

Smart Sync Secure File Synchronization

Omega Systems' Smart Sync is the perfect compliment to our hosted services, providing file sharing and synchronization between laptops, desktops, smartphones, tablets and the web.

Leveraging the cloud to enable file servers, Smart Sync minimizes dependence on FTP and VPN connections. Even in a diverse or scattered IT environment, it enables productivity, giving essential control and visibility to administrators and business owners.

Smart Sync's "Team Share" feature allows users to securely and effectively collaborate with colleagues, clients and business partners. Anytime a file changes on a Team Share, everyone will have access to the most up-to-date version. Smart Sync tracks all user activity, including adds, deletes and changes, making it easy to download and restore any deleted files and previous versions.

Security and Control

Unlike most consumer-grade file sync services, Omega Systems' Smart Sync keeps business files safe by arming administrators with robust security and control features.

Businesses can:

- Limit or control which devices are permitted to sync
- Completely audit file syncs and changes
- Remotely wipe the data from devices that are lost or stolen
- Monitor and manage how employees are using their mobile devices

This solution is completely HIPAA compliant and provides the peace of mind business are looking for when evaluating an effective solution to their file sharing needs.
