

One Unprotected  
Mobile Device Can  
Cause Catastrophic  
Data Loss.

Is Your Business At Risk?

## Mobile Device Management

Secure, Remote Management of Mobile Devices in the Workplace.

It is no secret more and more businesses are embracing remote connectivity and the use of mobile devices to conduct day-to-day business. The convenience of accessing company networks anywhere, anytime is a growing trend with productivity and flexibility ranking at the top of the benefits list.

While this solution empowers staff members and enhances overall business functionality, employers are ultimately responsible for protecting company data and managing the risks of exposure. The common scenarios of a lost or stolen mobile device or poor judgment on the part of the employee will most likely result in costly repercussions, downtime, or company embarrassment.

### MDM [Mobile Device Management]

A Simple, Inexpensive way to Safeguard Against Mobile Device Vulnerability.

Omega Systems' MDM Service plan protects employee and company-owned mobile devices, provides device security & service, and implements necessary policies & procedures for adequate management and control.

- Enroll all employee & company-owned mobile devices
- Configure & apply corporate settings for Exchange
- Configure & enforce security & corporate policies
- Instantly lock or wipe mobile device in the event of theft or loss
- Ensure IT network security

*"When a business connected mobile device is lost, there is more than an 80% chance an attempt will be made to breach corporate data and/or networks."*

- The Symantec Smartphone Honey Stick Project.
