

Smart Secure Edge

Managed SASE (Secure Access Service Edge)

Simplify secure remote access with always-on connectivity wherever your workforce is.

Modern security threats require modern security solutions – ideally without breaking budgets or sacrificing productivity. With Omega’s managed SASE solution, today’s businesses can take a cloud-first approach to network security, saying goodbye to costly hardware and traditional VPN solutions and hello to fast, reliable connectivity from anywhere.

Smart Secure Edge is ideal for companies such as:

Why SASE?

- ✓ **Performance Improvement**
Low latency connectivity ensures faster speeds compared to traditional VPN solutions
- ✓ **Increased Security & Trust**
Zero trust security and content filtering are baked in to keep malicious threats out
- ✓ **Seamless User Experience**
Always-on VPN automatically secures traffic; no manual connection needed!
- ✓ **Lower Costs**
Eliminates expensive hardware costs and bundles multiple network security features into one operating expense

Cloud-first SMBs
that need fast
access to SaaS
apps & workloads

**Hybrid/remote
businesses**
with distributed
workforces

**Mid-market
organizations**
without complex
legacy infrastructures

**Budget savvy
businesses**
looking to reduce
costs without
sacrificing security

Core Features of Smart Secure Edge

Supported by Omega's experienced managed security team, Smart Secure Edge offers an affordable, scalable path to modernize your cybersecurity strategy with built-in visibility, simplified management, and always-on protection.

Always-on Connectivity

- + Delivers secure Internet and network drive access with no manual connection needed

Cloud-Based Firewall

- + Connect from anywhere and scale with ease without expensive hardware outlays

Zero Trust Security

- + Ensures only verified users can access the network

Full SSL Inspection

- + Examines encrypted traffic to detect malicious activity and prevent threats

Secure DNS & Web Filtering

- + Built-in security features safeguard against malicious hosts and filter out suspicious URLs/content

Cross-Platform Compatibility

- + Support for Windows, Mac, Linux, iOS, Android and Chromebook
